VERIFIED VIEW SURVEY METHODOLOGY

- For each agreed photo viewpoint location a marked up photograph or location plan will be supplied by the Client, prior to commencement on site.
- The surveyor will establish each viewpoint using a Leica Global Positioning System (GPS). A timber peg or survey pin will be used for permanent marking.
- Where GPS positioning is not possible near to the required survey point, the surveyor will traverse traditionally to the position from an established GPS point.
- The surveyor will record a range of up to 12 reference points, using a reflectorless Total Station. These points will be in the foreground and background, high level and low level.
- Data processing will be conducted in the Office and referenced back to the Ordnance Survey Network.
- Delivery of the Data will be by e mail in the form of an Excel spreadsheet and or a text spreadsheet plus a photograph marked with the reference points.
